Vladyslav Kalynchneko

Software Engineer

+48 881-641-440| vladyslav.kalynchenko@gmail.com| linkedin.com/in/vladyslav-kalynchenko-531a20277/

Summary

Software Engineer with **4 years** of commercial **experience** in **software development**, **maintenance**, and production **support**. Experienced in **building** and **maintaining Java/Spring Boot** applications and **microservice** based systems, with a strong focus on **reliability**, **scalability**, and **high availability**.

Experienced with supporting payment systems, e-commerce platforms, and production infrastructure, including **application monitoring**, **troubleshooting**, and **maintaining** server **uptime**. Solid **understanding** of **network infrastructure**, **cloud architecture**, **microservices**, **observability**, and **distributed systems**.

Currently **pursuing** a **Master's degree** in Computer Science **at PJATK**. **Cloud expertise** is **supported** by the **Microsoft Azure Administrator** certification and **AWS Academy Graduate** certification.

Skills

Technical Skills: Java, Spring Boot, JPA/Hibernate, microservices, JavaScript, HTML, CSS, SQL, Maven, Docker, REST APIs, Git, AWS, Linux(Ubuntu, Debian), C#, .NET, NoSQL(CassandraDB, MongoDB), Splunk/OpenSearch, Observability and Monitoring systems.

Experience

Grid Dynamics, Junior Software Engineer
Warsaw
December/2025 – Present

SRE team member specializing in application **performance monitoring**, **incident response** and **bottleneck analysis**. Responsible for **investigating** issues across frontend and backend codebases, **coordinating** with relevant teams, **presenting** findings and **preparing** summary **reports**.

Project: Business-critical payment system operating in production environments. Requires high availability, continuous monitoring, and rapid incident response to maintain service reliability and minimize the impact of performance degradation or production issues.

Tools: Splunk, OpenSearch, Hadoop, Git, Linux, monitoring and observability platform(grafana)

Technologies: Java, Spring Boot, REST APIs, SQL, JavaScript, Linux, Microservices

Grid Dynamics, Software Engineer Intern
Warsaw
June/2025 – December/2025

As a Java intern, I am gaining hands-on experience with **Java**, **Spring Framework**, software development process, and **UML**. This role involves learning and applying core **Java concepts**, understanding the principles of object-oriented programming and deepening my **Spring Framework** knowledge.

Project: Smart-home management platform providing backend services for controlling and managing connected devices. The project was developed collaboratively by a team of interns under the mentorship of a Senior Software Engineer.

Dev Team: 4 Backend Interns; 1 Senior PM

Technologies: Java, Spring Framework, REST APIs, Maven, Git, UML

Cloud: Microsoft Azure

SoftServe IT Academy, Student
Remote
April/2025 – June/2025

Completed a practical **Java development program** focused on applying core software engineering concepts through assignments and project-based work. Strengthened knowledge of **Java, object-oriented programming, collections, exception handling, debugging, testing, and clean code principles**.

Worked on practical programming tasks covering application design, code structure, problem-solving, and common software development workflows. Applied theoretical concepts to real development scenarios while improving understanding of **maintainable code, application architecture, and software engineering best practices**.

Technologies: Java, OOP, Git

Projects

- As one of my personal projects, I build and **maintain server infrastructure** using consumer-grade hardware. My current setup includes a **home lab** with **dedicated server**, self-built **pfSense router**, **VLAN** segmentation, a **DMZ** zone, a **NAS** running in a virtual machine on **Proxmox**, **Home Assistant** for energy consumption **monitoring**, a digital library, and a **DNS server** configured with DNS-over-HTTPS via Cloudflare.
- Currently working on a **thesis project** focused on **bidirectional communication with multiple clients over HTTP**. The project involves **Spring Boot** microservices, Directus **CMS**, a **SQL** database and **Redis** for caching. Its goal is to create a **partition-resilient** real-time product tracking **system**.
- Website project, fully deployed and configured by me. Backend is written in **Java**, **Spring Boot**, frontend is written in **Angular**. First experience in deploying a website(cloud provider: Hetzner). Backend and Frontend are available to the public on my **GitHub**. The project has features like **JWT authorization, CMS and CMR.** Backend Link Frontend Link
- Website for Law Firm. This is my first commercial experience in web development. For this project I use **Spring Boot** (Backend) and **Angular** (Frontend). This is a solo project, so I am responsible for design and software. The project has features like **JWT authorization, CMS and CMR.** Backend Link Frontend Link

Education

Polish-Japanese Academy of Computer Technology — Warsaw, Poland

Master's degree in Computer Science — *2026-2027*

Bachelor's degree in Computer Science — *2022 - 2026*
University Ranking: 13th among all technical universities in Poland by Perspektywy

AWS Academy Graduate - AWS Academy Cloud Foundations — *03.2022 – 06.2022*

Certificate

Microsoft Azure Administrator (AZ-104) — *11.2025-11.2026*

Certificate
